

AIRLOCK

*Our hardware firewalls protect your network from hackers, spammers and the biggest threat of all: **your staff.***

YOUR NETWORK IS YOUR BUSINESS AND IT'S A LOT MORE VULNERABLE THAN YOU THINK.

Outside threats like viruses, malware and spam get a lot of attention, but your employees are often the biggest concern. Just like the cold and flu germs they spread around the cubicles, your staff's online behavior can infect your IT systems. Your employees can be unwitting carriers of malware that spreads throughout the Internet with your name on it.

Software-based anti-virus protection is too limited to really protect your network. You need a hardware-based firewall like AirLock to make sure you trap the bad stuff coming in and stop any bad stuff from going out.

Your customized AirLock will prevent unauthorized access, establish secure perimeters, block policy-violating content and direct traffic to control bandwidth utilization. There's no reason why your valuable network should be bogged down by inappropriate uses by employees.

There is no excuse to be vulnerable.

INSTALLING AIRLOCK ISN'T DIFFICULT, BUT IT IS CRITICAL.

PC Solutions will assess your system security needs and configure the right AirLock rules for your network. On a regular basis we'll monitor and maintain AirLock to make sure it's always a step ahead of spammers and hackers. If there is an incident, PC Solutions is ready to respond. It takes some time and a lot of expertise to get it set up correctly. But once it's there, that little black box will be the most reassuring investment you'll ever make.
